LRSE and MDR genotypes

- mecA+
- 23S (G2576T)
- 23S (C2534T)
- 23S (T2504A)
- rpl2 (Val112Ile)
- rpl2 (Ile75Thr)
- rpl3 (Asp159Tyr)
- rpl3 (Met156Thr)
- rpl3 (Gly152Asp)
- rpl3 (His146Arg)
- rpl3 (Gly137Val)
- rpl4 (Asn158Ser)
- cfr+
- rpoB (Asp471Glu)
- rpoB (His481Asn)
- rpoB (Ile527Met)

Supplemental material Fig. S1. Maximum-likelihood phylogeny of *S. epidermidis* population (n=554) based on core-SNP alignment. Color of the branches is matched bootstrap analysis scale in range 51 – 100, blue color is matched maximum bootstrap, red – the minimum. Background color fill is matched to BAPS – clustering (BAPS 1 to BAPS 8). LRSE isolates is marked triangles: from Russia (current study), USA (Tewhey et al., 2014), France (Dortet et al., 2018), Germany (unpublished data, only metadata is available BioProject PRJNA314440) and Brazil (unpublished data, only metadata is available from BioProjects PRJNA419710, PRJNA419705, PRJNA419706 and PRJNA419711). Annotation from inner to outer circle: *in silico* linezolid resistance prediction; MLST data (only prevalence STs are shown: ST2, ST5, ST22, ST186, ST23 and ST59); presence *mecA*, linezolid resistance (mutations G2576T, C2534T, T2504A, rpl2 (Val112Ile, Ile75Thr), rpl3 (Asp159Tyr, Met156Thr, Gly152Asp, His146Arg, Gly137Val), rpl4 (Asn158Ser) genes and presence of *cfr* and *rpoB* mutations (Asp471Glu, His481Asn, Ile527Met). The outer bar chart is matched to the number of acquired resistance genes (from 1 to 13 genes, specific chromosomal mutations were not included here). Followed genes were screened: *mecA*, *blaZ*, *aacA-ACI1*, *aadA1*, *ant(4')-Ia*, *ant(6)-Ia*, *ant(9)-Ia*, *aph(2'')-If*, *aph(2'')-Ih*, *aph(3')-IIIa*, *aph(6)-Id*, *catA7*, *catA8*, *cfr*, *dfrC*, *dfrG*, *ermA*, *ermC*, *fexA*, *fosA6*, *fosB*, *fosD*, *fusB*, *fusC*, *lnuA*, *lsaB*, *mefA*, *mphC*, *msrA*, *msrD*, *mupA*, *tetB*, *tetC*, *tetK*, *tetM*, *vgaA*, *vgaB*.
