

Tree scale: 0.01

Supplemental material Figure S2. Structure alignment of *cfr*-harboring plasmids. In analysis were included *S. cohnii* (blue color name, GenBank - KC820816.1) *S. hominis* and *S. haemolyticus* plasmids (red color name, current study); *S. epidermidis* (green color name, GenBank BioProject - PRJEB22222); *S. aureus* strain 004-737X (KC206006.1) and *S. aureus* strain CFSAN064038 (CP028164.1), violet color names; *S. aureus* strain M12/0145 (orange color name, KU521355.1); Year is matched of date isolation. Collinear blocks (regions with high sequence identity without rearrangements) produce by Mauve software shown in alignment with different colors. Phylogenetic tree were calculate using SNPs extracted from plasmids core-genes.
